

Background to scripting in scala

Acronyms

(*scala* is *not* an acronym!)

- *sbt* Scala Build Tool
- *REPL* Read-Evaluate-Print-Loop. (The bash shell is an example of a REPL. So is the sbt console.)

Set up your work environment

- a folder with a `build.sbt` file
- start a REPL in that folder:

```
sbt console
```

Proceed to Some fundamental concepts
